`CF`: Carry flag. Most recent operation generated carry from most significant bit. Detects overflow in unsigned operations.

`ZF`: Zero flag. Most recent operation yielded 0.

`SF`: Sign flag. Most recent operation yielded a negative value.

`OF`: Overflow flag. Most recent operation caused a two's complement overflow.

There are analogous `cmov` (conditional move) and `set` (for accessing conditional codes) instructions. Other important operations include:

`call`: Calls a function at specified label.

`ret`: Return control to address on top of stack. Synonymous with `retq`.

`rep`: Or `repz`, can be ignored.

`nop`: Effectively does nothing.

`leave`: Move `%rbp` to `%rsp`, then pops `%rbp`.

Equivalent floating point operations for movement, conversion, comparison, arithmetic, etc.
